

SAGAR SAINI

Full-Stack / Backend Engineer

sagarfeb298@gmail.com | India | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

SUMMARY

Full-Stack / Backend Engineer with 3+ years building and shipping production web applications using Python, Django, Django REST Framework, FastAPI, Flask, JavaScript, and React. Experienced in JWT-secured REST APIs, Redis caching, Celery background jobs, PostgreSQL data modeling, and cloud deployment on Docker, Railway, and Vercel. Open-source contributor to SymPy; ranked top 13% on LeetCode (900+ problems solved).

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML5, CSS3, C

Backend: Django, Django REST Framework (DRF), FastAPI, Flask, flask-smorest, Celery, REST APIs, JWT/SimpleJWT, django-filter, Gunicorn

Frontend: React, Vite, React Router, TanStack Query, Tailwind CSS, axios, Bootstrap

ML / AI: LLM evaluation, RLHF, ChatGPT, Claude, prompt engineering, agentic task design, CNNs, model training & inference pipelines

Data & DevOps: PostgreSQL, MySQL, SQLite, Redis, Git/GitHub, Docker, Railway, Vercel, CI/CD, Postman, Swagger/OpenAPI, Linux/Bash

Core CS: Data Structures & Algorithms, OOP, System Design fundamentals

EXPERIENCE

Freelance Full-Stack & Backend Engineer — Remote

Jan 2026 – Present

- Built [MandiConnect](#), an API-first local-market price-comparison platform delivered as a client project — a Django 5 + DRF JSON API with Redis-cached comparison/trend endpoints, Celery/Beat background jobs, JWT role-based auth, and geo search — deployed on Railway via Docker.
- Over a five-month engagement at Harbor (Jan – May 2026), built and evaluated terminal-bench agentic tasks spanning scientific computing, model training, and software-engineering (SWE) domains — authoring Dockerized environments, automated tests, and scoring/judging logic to benchmark LLM coding agents.
- Contributed to RLHF data pipelines and model evaluation, and shipped full-stack and backend features with Python, FastAPI/Django, REST APIs, and PostgreSQL across client projects.

Python Developer — Turing (Remote)

Nov 2024 – Dec 2025

- Fine-tuned and evaluated large language models using RLHF across multiple Python libraries, curating SWE-Bench-style software-engineering tasks and analyzing agent behavior to improve reliability on real-world problems.
- Built and reviewed human cursor/interaction data-collection and quality-assurance pipelines supporting model training and benchmarking, with structured routing and validation in Python.

Software Engineer — Lyceum Gurukul Pvt. Ltd.

Sep 2023 – Oct 2024

- Designed and maintained Django + Django REST Framework backends for client web applications, including a healthcare platform with secure, role-based REST APIs and normalized PostgreSQL data models.
- Implemented backend workflows, authentication, and pagination/filtering; conducted thorough API testing with Postman; and built an internal employee management dashboard for data management and reporting.

KEY PROJECTS

Prism — Social Blogging Platform (Live)

Django, DRF, React, Redis, PostgreSQL, JWT

- Engineered a full-stack blogging platform (Medium/dev.to style) with a DRF JSON API and a React (Vite) SPA, deployed independently on Railway and Vercel; JWT auth (SimpleJWT) with silent token refresh and per-endpoint permissions.
- Modeled 8 related entities (custom User, Post, Follow, Like, Bookmark, Comment, Tag, Notification) with serializers, pagination, and django-filter search; added per-user Redis caching with write-invalidation and a React UI featuring TanStack Query optimistic updates, infinite scroll, and a live Markdown editor. [social-blog-app-gamma.vercel.app](#)

MandiConnect — Local Market Price Platform (Live)

Django, DRF, PostgreSQL, Redis, Celery, JWT

- API-first platform where customers compare live vendor produce prices and vendors manage daily listings — Django 5 and Django REST Framework serving a JSON API consumed by server-rendered pages via jQuery AJAX, with auto-generated Swagger docs.
- Built JWT role-based permissions (customer / vendor / admin), Redis caching and throttling, Celery / Beat jobs (nightly price snapshots, email alerts, CSV exports), and geo radius search; deployed on Railway via Docker. [web-production-71394.up.railway.app](#)

Terminal-Bench — Task Deliverables for Turing

Python, Docker, Bash

- Created and curated Terminal-Bench task deliverables for Turing — building Dockerized, reproducible environments and authoring end-to-end tasks with automated test suites.
- Benchmarked coding agents across realistic terminal-based scenarios, designing scoring and judging logic to measure correctness and reliability.

Medical Platform — Healthcare Web App

Django, DRF, PostgreSQL • Lyceum Gurukul, 2023–24

- Built backend REST APIs for a client healthcare platform as part of a team at Lyceum Gurukul, using Django and Django REST Framework with a normalized PostgreSQL schema.
- Implemented secure, role-based endpoints, authentication, and data models, and validated functionality through structured API testing with Postman.

EDUCATION & ACHIEVEMENTS

B.Tech, Shri Mata Vaishno Devi University (SMVDU)

July 2023

- CGPA 8.6/10 • Gold Medalist • Six-Semester Full Merit Scholarship • LeetCode top 13% (900+ DSA problems) • SymPy open-source contributor ([merged PR #21259](#)).
